

Electrical Service - Variable Frequency Drives

We know drives and how they work. Repairing a drive, or retrofitting a new drive in a complex control system is our specialty. With our turn-key, immediate response capability we will have your business up and running quickly. We are control experts for reconfiguring any existing system to a new VFD, as well as expert electrical troubleshooters.

This new drive was retrofitted on an industrial washing machine. The drive was integrated to work with the existing controls.

Why use Wazee to perform a VFD upgrade?

- One company to get you up and running
- Immediate response
- Downtime is minimal

Variable Frequency Drives

- Installing a VFD drive can save your business money on operating cost by varying the load and motor speed.
- A motor that operates at a lower speed will consume less energy, which will reduce your electric bill.

24/7 service
